Application No: 10/015,708
Attorney's Docket No: US010602**CLAIM AMENDMENTS**

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims

1. (Currently Amended) A method for obtaining service information over the Internet, the method comprising:

at least one service provider registering a service with a UDDI server and storing the same in a database;

a user requesting a service from the UDDI server;

initially searching the database for the requested service;

updating the database;

notifying the user by e-mail and telephone of the results of the initial search;

subsequently searching the updated database for the requested service in response to the initial search of the database determining that the service is either not found in the database or the service is found but is not available; and

notifying the user by e-mail and telephone of the results of the subsequent search.

2-3. (Canceled)

4. (Previously Presented) The method of claim 1, wherein the registering further comprises registering a corresponding service status for the service, and if the requested service

Application No: 10/015,708
Attorney's Docket No: US010602

is found in the database from either the initial or the subsequent search, the corresponding notifying comprises informing the user of the corresponding service status of the requested service.

5. (Previously Presented) The method of claim 1, wherein if the requested service is not found in the database from either the initial or the subsequent search, the corresponding notifying comprises informing the user that the requested service is not registered with the server.

6. (Original) The method of claim 1, further comprising storing the request for the service in the database for the subsequent search.

7. (Original) The method of claim 6, further comprising notifying the user that the service request has been stored.

8. (Original) The method of claim 7, wherein the notifying that the service request has been stored comprises sending an e-mail to the user indicating the storage of the service request.

9. (Previously Presented) The method of claim 1, wherein the registering further comprises registering a corresponding service status for the service, and if the requested service

Application No: 10/015,708
Attorney's Docket No: US010602

is found on the UDDI server in the initial search and the service status indicates that the service is available, the corresponding notifying of the initial search results comprises informing the user that the requested service is available.

10. (Previously Presented) The method of claim 1, wherein the registering further comprises registering a corresponding service status for the service, and if the requested service is found on the UDDI server in the initial search and the service status indicates that the service is unavailable, the corresponding notifying of the initial search results comprises informing the user that the requested service is unavailable.

11. (Original) The method of claim 10, further comprising storing the request for the service in the database.

12. (Original) The method of claim 11, further comprising notifying the user that the service request has been stored.

13. (Original) The method of claim 12, wherein the notifying that the service request has been stored comprises sending an e-mail to the user indicating the storage of the service request.

14. (Previously Presented) The method of claim 1, wherein the registering further comprises registering a corresponding service status for the service, and if the requested service

Application No: 10/015,708
Attorney's Docket No: US010602

is not found on the UDDI server in the initial search but found in the subsequent search and the service status indicates that the service is available, the notifying of the subsequent search results comprises informing the user that the requested service has been found in a subsequent search and is available.

15. (Previously Presented) The method of claim 1, wherein the registering further comprises registering a corresponding service status for the service, and if the requested service is not found on the UDDI server in the initial search but found in the subsequent search and the service status indicates that the service is unavailable, the notifying of the subsequent search results comprises informing the user that the requested service has been found in a subsequent search and is unavailable.

16. (Previously Presented) The method of claim 1, wherein the updating comprises permitting at least one additional service provider to register with the UDDI server.

17. (Original) The method of claim 1, wherein the registering further comprises registering a corresponding service status for the service and the updating comprises permitting the at least one registered service provider to change the corresponding service status.

18. (Currently Amended) A system for obtaining service information over the Internet, the system comprising:

Application No: 10/015,708
Attorney's Docket No: US010602

a UDDI server having a memory operatively connected thereto for storing a database of services by service providers;

means for receiving a request for a service by a user;

means for initially searching the database for the service request;

means for updating the database;

means for notifying the user by e-mail and regular mail of the results of the initial search;

means for subsequently searching the updated database for the requested service in response to the initial search of the database determining that the service is either not found in the database or the service is found but is not available; and

means for notifying the user by e-mail and regular mail of the results of the subsequent search.

19-20. (Canceled)

21. (Original) The system of claim 18, further comprising a memory for storing the request if the requested service is not found in the database in the initial search.

22. (Previously Presented) The system of claim 18, wherein the means for updating comprises means for permitting at least one additional service provider to register with the UDDI server.

Application No: 10/015,708
Attorney's Docket No: US010602

23. (Original) The system of claim 18, wherein the at least one service provider further registers a corresponding service status for the service and the means for updating comprises means for permitting the at least one registered service provider to change the corresponding service status.

24. (New) A method for obtaining service information over the Internet, the method comprising:

at least one service provider registering a service with a UDDI server and storing the same in a database;

a user requesting a service from the UDDI server;

initially searching the database for the requested service;

updating the database;

notifying the user by e-mail of the results of the initial search;

subsequently searching the updated database for the requested service in response to the initial search of the database determining that the service is either not found in the database or the service is found but is not available;

notifying the user by e-mail of the results of the subsequent search including a name, address and phone number of a service provider; and

charging a fee to the user.
